

For Immediate Release:

PixelTools announces major update to QuickTime Export Component

“We are a group of dedicated image processing specialists. Our goal is to offer the highest quality video compression software for developers, animators, and broadcasters.”

Las Vegas - 16 April 2012 PixelTools today announced a major update of their popular QuickTime Plug-In **HDPProQT** that adds support for 8 channel PCM data per SMPTE 302m.

HDPProQT plugs into popular editing programs and provides reliable export of broadcast ready and on-boarding video directly from the time line. Presets assure complete compliance to standards such as Cable Labs and to delivery specifications such as Netflix.

Simplifies Delivery of On-boarding Content

“This new update greatly simplifies the work flow for content providers to produce On-boarding deliverable content with 8 channel PCM data on Mac or Windows platforms” remarked CTO Mark Conover.

[PixelTools](#) is a software development company with over a decade of experience delivering out-of-the-box and custom multimedia compression solutions for their customers. PixelTools’s real-time software for Mac, PC, Linux and UNIX platforms ease the task of creating high performance MPEG end products. Not sure which product to buy?
